

Temperature Stabilized SM Fiber Output LD Light Source FOLS-02

FOLS-02 is SM fiber output LD light source with SM output fiber, LD chip, TEC, driving circuit and power supply.

375nm ~ 1550nm wavelength region can be selected for each application.

Output power is 1mW ~ 10mW CW.

Pulse emission is achieved with external TTL trigger input.

LD module inside is temperature controlled for stable power and wavelength operation.

Property

- Fiber output for easy use
- Ultra-violet, visible and infra-red
- 1mW~10mW output
- Stable power and wavelength operation
- Pulse emission with external TTL trigger input

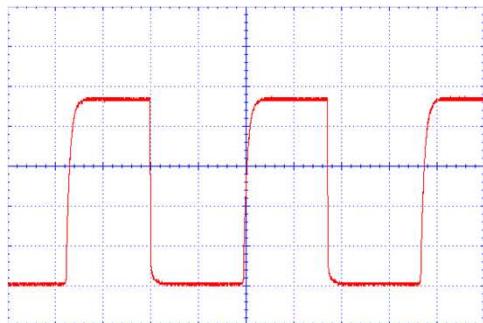

Application

- Exciting source for fluorescence experiment
- Evaluation of PD, PMT, fiber, optical components
- Alignment of Optical system
- Spectral analysis
- Optical sensing
